The U.S. forklift division based in Cleveland has a expert team experienced in Sales, Purchasing, Marketing, Logistical and Technical Support.

Originally the home-based lift truck market in Korea was an open import enterprise. Korea Machinery Co. Ltd. begun in 1960, to import fully assembled forklifts as part of a home-based equipment expansion project. Product sales of these goods were initially targeted to state-run corporations, large scale businesses, and the armed forces. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a lift truck production plant was successfully completed. Continuous technical training became the new focus for improving quality and product development.

Daewoo began the first home-based forklift business in 1967, and rapidly gained a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's sophisticated technological advancements combined with sales success placed them in a position of substantial expansion of their lift truck business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint enterprise project to counter act competitive pressures in the US materials handling industry. This project drastically expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a contemporary plant which helped set up the company for the fabrication of high end added-value goods suitable for export. In 1993, the company had a global sales system and started exporting models they had established through in-house technology, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth opportunities into overseas marketplaces.
