

Fork Positioner for Forklift

Fork Positioner for Forklifts - A fork positioner is actually a device constructed out of high quality materials designed to be able to endure the most difficult operations and work environments. This particular piece of equipment can enable drivers to operate the forks hydraulically without leaving the seat. Side shifting units have the extra ability to be able to laterally position the arms or the entire load in order to facilitate more precise carrying and placement in a quicker and much more effective method.

The only one of its kind fork pocket design enables the individual operating it to be able to safely sway the unit's forks without any fear of destroying the positioning cylinders. This can allow the operator the choice to either execute independent or simultaneous fork movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be converted into blade positioners on existing units.
